Jincheng 26 Degree Community, Shenxing North Road, Qindu District, Xianyang City, Shaanxi Province, China, 712000

EDUCATION BACKGROUND

09/2022-06/2026

Jinan University

Bachelor of Engineering in Artificial Intelligence

GPA: 84.5/100

Honors:

- First Prize of the Undergraduate Group in the 2024 Asia and Pacific Mathematical Contest in Modeling (01/2025)
- Campus-Level Outstanding Student Backbone for the Academic Year 2024-2025
- Campus-Level Third-Class Scholarship for Outstanding Students for the Academic Year 2024-2025
- Campus-Level Outstanding Young Volunteer for the Academic Year 2023 (07/2024)
- Campus-Level Outstanding Student Backbone Scholarship for the Academic Year 2022-2023 (09/2023)
- Huawei Cloud Certified Developer Associate - Artificial Intelligence (12/2022)

RESEARCHES & COMPETITIONS

01/2025-05/2026

Project on Gaze Tracking Algorithm Based on L2CS Framework and Efficient Net-TSM and Its Application in Public Security Early Warning (Instructor: Assoc. Prof. Li Jun, Jinan University)

Team Leader

- Use the RetinaFace model for face detection and feature extraction, and employ L2CS-Net for predicting the 3D gaze direction. Replace the ResNet-50 backbone with EfficientNet-B4 for improved efficiency.
- Designed a multidimensional vector progressive coordinate transformation framework. Implemented a seamless transition from 2D images to spherical, camera, world, and body coordinate systems, addressing geometric distortions in panoramic surveillance. Introduced the head-body coordinate system to enhance the transferability of gaze analysis.
- Independently write code to identify the target of the person's gaze. Train and optimize the dual-path model and create an interface for detecting potentially dangerous individuals.

03/2024-06/2025

National College Students' Innovation and Entrepreneurship Training Program

Title: Soil Detection Model and Application Based on RPNet Deep Network Hyperspectral Image Classification (Instructor: Lecturer Lin Cong, Jinan University)

Team Member

- Implemented preliminary research on soil hyperspectral data, analyzing its significance and current research trends. Processed the collected data and designed a cross-domain aligned few-shot learning (FSL) classification model framework.
- Applied a meta-task-driven mechanism to enable the convolutional neural network feature extractor to learn transferable, universal feature representations, enhancing the model's ability to generalize across various tasks and improving its adaptability to diverse datasets and environments.
- Developed an attention-based feature and distribution similarity perception module, leveraging multi-objective loss

optimization to strengthen the model's cross-domain adaptability.

- Achievements: Leveraged rich source domain data to develop a few-shot recognition model for soil element content, significantly enhancing recognition accuracy in the target domain by effectively utilizing limited labeled data.

07/2024-08/2024

Guangdong Youth College Students' 'Hundreds, Thousands, and Tens of Thousands Project' Commando Action

Team Member

- Developed a predictive model using climate, pest, disease, and precipitation data for Boluo. Designed the UI of the website for real-time agricultural condition monitoring and completed the front-end platform setup using an HTML5-supported web development IDE and Android Studio to display data and provide recommendations for farmers.
- Gained attention from Boluo County and Huizhou Daily. Produced an agricultural guide for the next quarter, combining visualization and predictive data to offer comprehensive guidance.

03/2023-08/2023

AIGC Project Research and Study Group (Instructor: Assoc. Prof. Zhao Kuo, Jinan University)

Team Member

- Investigated Colossal Chat and Dolly's efforts to replicate ChatGPT's functionality and performance. Explored and applied SFT fine-tuning, RM reward model training, and RLHF reinforcement learning fine-tuning processes.
- Used high-quality instruction data for local deployment and debugging. Optimized model parameters and strategies, successfully replicating ChatGPT-like interactions with limited resources and fewer parameters.

INTERNSHIPS

08/2025-09/2025

Qindu Branch, China Mobile Communications Group Shaanxi Co., Ltd.

Network Security Intern

- Performed comprehensive security assessments of network systems using specialized tools and techniques, identifying vulnerabilities and risks, and developing solutions.
- Participated in emergency responses to cybersecurity incidents, investigating and resolving issues, analyzing root causes, and implementing measures to prevent recurrence.

01/2025-02/2025

Xiangnong Technology (Shaanxi) Co., Ltd.

Artificial Intelligence Intern

- Optimized machine learning models for AI projects, improving accuracy and efficiency through data cleaning, feature engineering, and model tuning.
- Researched AI technologies, tracked industry trends, and provided insights and recommendations to the team.

08/2024-09/2024

China United Network Communications Corporation Limited, Xianyang Branch

Big Data Research Assistant Intern

- Wrote and executed data collection scripts to extract and clean user data, removing invalid or erroneous records.
- Monitored script execution, addressing anomalies promptly, and contributed to establishing a data quality monitoring mechanism to ensure data reliability and stability.
